SCHOTT PYRAN® V & PYRAN® V+

Specialty glass for fire resistance in doors

PYRAN® is far superior to the traditional types of glass used in fire resistant glass. The secret lies in the combination of the material and the production process. The specialty glass combined with the manufacturing in a micro float facility, which is unique within the world, leads to fire resistant properties that surpass those of soda lime glass or glass ceramic by far.

PYRAN® V meets the strong requirements of fire resistance with limited sizes specifically for door vision panels. It is a monolithic glass tested and certified according EN13501 with fire protection requirements up to E 120.

Excellent technical specifications

Smooth surface &
distortion-free
mirror finish

Clear and colorless
Without wires
inside

Easy to process

Fire resistant for
120 min from
either sides

Stays transparent
during a fire

TGSG

SCHOTT
glass made of ideas

At a glance

With **PYRAN® V** SCHOTT offers a solution ideally suited and approved for Doors. Transparent fire rated glazing allows fire fighters a clear view into the room, even in the event of fire, because of no intumescent interlayer, enabling them to extinguish the fire at source.

Without vision distracting wires inside the glass and no amber tint, **PYRAN® V** noticeably enhances the design of every door. Easy processing leads to cost effectiveness and flexibility and short lead times.

Product overview	PYRAN® V
Thickness:	5.0 mm
Dimensions (certified):	max. 290 mm x 620 mm (thickness 5.0 mm)
Glazing type:	Door Vision Panel
E (Integrity):	up to 120 min.
EW (Radiation control):	up to 120 min. (depending on the size)
Weight	8.5 kg/m ² (thickness 3.8 mm) 11.1 kg/m ² (thickness 5.0 mm)
Light transmission:	92 %
U-Value:	5.7 W/m ² K
Sound insulation	29 dB (thickness 3.8 mm) 30 dB (thickness 5.0 mm)
